

### **International Activities**

JS has encouraged international involvement through participation in international conferences and by gathering information on advanced cases, surveys and research technologies in the sewerage field. From the standpoint of international technical cooperation for the dissemination of Japanese sewerage technologies in developing countries, JS has dispatched experts (50 experts in total) based on the requirements of the Japan International Cooperation Agency (JICA).

Japanese local municipalities and companies have recently entered the world's water-related business. In 2011, JS established the International Affairs Office in its headquarters to fulfill the following tasks:

- Evaluations of the technologies that companies have developed for adaption to various countries' projects
- International standardization of sewerage standards
